OBJECTIVE

CS student with hands-on experience in AI agents, RAG pipelines, RESTful API development, and React applications, seeking full-time software engineering roles.

EDUCATION

Bachelor of Engineering, Computer Science, Government Engineering College, Gandhinagar Expected July 2026
CGPA: 8.5

SKILLS

Programming Languages	Python, SQL, JavaScript
Frameworks & APIs	FastAPI, React.js, REST APIs, gRPC, LangChain, LangGraph
AI/ML & Agentic Systems	Machine Learning, Retrieval-Augmented Generation (RAG), AI Agents, Mod
Databases & Caching	PostgreSQL, MySQL, SQLite, ClickHouse, Redis
Cloud & DevOps	Google Cloud Platform (GCP), Docker, Kubernetes, CI/CD
Distributed Systems & Messaging	Apache Kafka, Celery, Microservices Architecture
Tools & Platforms	Git, Linux

EXPERIENCE

Python Developer Intern Jan 2026 - Present
NetAI Gandhinagar, India

- Worked on RESTful backend services using FastAPI and developed an MCP-based chatbot with a multi-tool agentic architecture for automated network queries.
- Developed a RAG chatbot for the product landing page, enabling context-aware responses over product documentation, along with a MIB Browser featuring advanced search.
- Built a service-based landing page using React.js.
- Worked with Linux-based microservices architecture and Celery and gRPC for asynchronous task processing and inter-service communication in a distributed backend system.

PROJECTS

AI Habit Tracker & Productivity Coach. Built an intuitive productivity dashboard with progress heatmaps, mood tracking, completion trends, and AI-generated weekly performance summaries to help users monitor habits and gain actionable insights. *(Python, React.js, LangChain, PostgreSQL)*

AI RAG Chatbot. Developed an AI-powered RAG chatbot using OpenAI Embeddings and LangChain, implementing text chunking, vector search, and semantic retrieval for context-aware question answering. *(Python, LangChain, OpenAI, FastAPI)*

MIB Browser. Developed a MIB Browser with a powerful search engine supporting 100,000+ OIDs, built on PostgreSQL and React.js. Implemented List, Table, and Tree views along with a role-based admin panel for user management and CRUD operations. *(React.js, PostgreSQL, FastAPI)*

Heart Attack Prediction System. Trained a Decision Tree classifier on real health data (age, cholesterol, BP, heart rate) to predict heart attack risk with explainable, human-readable decision paths. *(Python, Scikit-learn, Pandas)*
